

PROFILE SUMMARY

Java Full Stack Developer with 5+ years of experience designing scalable enterprise applications using Java 21, Spring Boot, Microservices, React.js, Kafka, and Cloud platforms (AWS & Azure). Experienced in building secure REST APIs, event-driven architectures, cloud-native applications, and high-volume batch processing systems. Hands-on expertise in API integrations, CI/CD automation, containerization, and AI-assisted development using GitHub Copilot and Claude to accelerate modernization and improve engineering productivity.

TECHNICAL SKILLS

Languages:	Java, J2EE, Python, Bash, JavaScript, TypeScript, SQL, PL/SQL, C
Frameworks:	Spring Boot, Spring MVC, Spring Security, Hibernate, Node.js, Express, Django, Flask
Frontend:	React.js, Angular, HTML5, CSS3, JavaScript, TypeScript, Tailwind CSS, Bootstrap, Next.js, Vue.js
Cloud Platforms:	AWS, Azure, Google Cloud
Databases:	PostgreSQL, MySQL, Oracle, MongoDB, Redis
DevOps:	Docker, Kubernetes, Jenkins, GitHub Actions, Git, Maven, Gradle, SVN, Azure DevOps
Monitoring:	CloudWatch RUM, New Relic, Kibana
Integration:	Apache Kafka, RabbitMQ, ActiveMQ, JBoss Fuse, REST, SOAP, GraphQL, JWT, OAuth2
Testing & QA:	JUnit, Mockito, TestNG, Postman, REST Assured, Selenium, SonarQube, Spock
AI Productivity:	GitHub Copilot, Claude, Speckit, LLM-assisted Development, Prompt Engineering

EXPERIENCE

LACERA

Jan 2026 - Present

Java Developer

Los Angeles, CA

- Developed and maintained enterprise applications using Java 21, Spring Boot, Spring Batch, and Spring JDBC for insurance and benefits administration systems.
- Designed and optimized high-volume batch processing workflows for eligibility, enrollment, notifications, and dependent lifecycle management.
- Developed complex DB2 SQL queries and optimized database operations to improve application performance and data processing efficiency.
- Built Power BI integration by generating and delivering data feeds for business intelligence reporting and analytics.
- Implemented IBM FileNet P8 integration by generating XML payloads and automating JLetters document ingestion workflows.
- Containerized Spring Boot microservices using Docker and deployed applications on Kubernetes clusters supporting scalable cloud-native deployments.
- Integrated applications with Azure File Share for secure file storage, transfer, and enterprise batch processing.
- Designed scalable RESTful APIs supporting distributed microservices architecture with secure OAuth2/JWT authentication, asynchronous messaging using Kafka, and high availability for enterprise-scale applications.
- Leveraged GitHub Copilot, Claude, and Speckit to accelerate Java development, automate code generation, modernize legacy COBOL modules, and improve developer productivity across enterprise applications.
- Used AI-assisted development for code refactoring, SQL optimization, documentation generation, debugging, unit test creation, and migration planning, reducing manual effort and accelerating delivery timelines.

- Optimized Spring Boot services and SQL queries to improve batch processing performance and reduce execution time for high-volume enterprise workloads.
Performed production support, performance tuning, root cause analysis, and defect resolution while ensuring application reliability and maintainability.
- Investigated production incidents using application logs, SQL analysis, and monitoring tools, performing root cause analysis and implementing permanent fixes to improve system stability.
- Collaborated with cross-functional teams using Agile methodologies, participating in requirements analysis, code reviews, testing, deployment, and release activities.
- Participated in Agile Scrum ceremonies including sprint planning, backlog grooming, daily stand-ups, sprint reviews, and retrospectives while collaborating with product owners and QA teams.

Credit Suisse

March 2024 - Dec 2025

Software Developer

Cleveland, Ohio

- Designed and developed robust APIs using a microservices architecture with Spring Boot and JMS, incorporating Kafka for asynchro-nous communication to meet complex IT project requirements.
- Crafted custom React hooks to encapsulate intricate DOM logic, supporting agile development practices and promoting code reusability in enterprise web applications.
- Implemented Spring Data JPA repositories with diverse CRUD operations, filtering, and complex data retrieval tasks to fulfill detailed business requirements analysis.
- Enhanced CI/CD pipelines leveraging Jenkins and Kubernetes to automate testing and deployments, aligning with iterative development and enterprise IT standards.
- Designed and documented REST APIs using OpenAPI/Swagger, enabling seamless integration between internal and external enterprise applications.
- Developed resilient microservices following distributed system design principles with asynchronous messaging using Kafka and JMS.
- Strengthened API security protocols by integrating JWT tokens and session expiration policies, ensuring compliance with departmental data and security mandates.
- Improved application quality through SonarQube analysis, code reviews, and static code analysis, ensuring compliance with enterprise coding standards.
- Applied test-driven development (TDD) using Selenium and JUnit 5 for comprehensive unit and integration testing, achieving significant code coverage for RESTful APIs.

Practo

July 2021 - Aug 2023

Java Full Stack Developer

Bengaluru, India

- Developed and maintained Spring Boot microservices for patient appointment scheduling, electronic health records (EHR), doctor availability management, and teleconsultation workflows.
- Designed and implemented secure RESTful APIs to integrate healthcare applications with third-party providers, payment gateways, diagnostic laboratories, and pharmacy services.
- Built event-driven microservices using Apache Kafka for appointment notifications, prescription updates, patient reminders, and healthcare event processing.
- Developed responsive user interfaces using React.js, TypeScript, JavaScript, HTML5, and CSS3, delivering seamless experiences for patients, doctors, and healthcare administrators.
- Integrated React applications with backend services using Axios to enable secure real-time data exchange and dynamic patient dashboard updates.
- Implemented Spring Security with OAuth2 and JWT authentication to protect sensitive patient information and ensure secure access to healthcare applications.

- Modernized legacy healthcare applications by migrating monolithic services to cloud-native microservices architecture, improving scalability, maintainability, and deployment efficiency.
- Optimized application performance through JVM tuning, SQL query optimization, and efficient multithreading, improving API response times and overall system throughput.
- Managed Azure cloud infrastructure using App Services, Virtual Machines, Blob Storage, Azure Monitor, and Azure DevOps pipelines to support highly available healthcare applications.
- Configured Azure VNets, Network Security Groups (NSGs), and Application Insights to enhance application security, monitoring, and operational reliability.
- Developed reusable backend components using Spring Data JPA, Hibernate, and PostgreSQL/MySQL to streamline patient, provider, appointment, and medical records management.
- Implemented CI/CD pipelines using Azure DevOps and Jenkins to automate build, testing, and deployment processes, reducing release cycles and improving software quality.
- Collaborated with product owners, QA engineers, and cross-functional Agile teams to deliver secure, HIPAA-aware healthcare solutions while participating in sprint planning, code reviews, and release activities.
- Resolved production issues through root cause analysis, log monitoring, and performance tuning, ensuring high availability and reliability of mission-critical healthcare applications.

Digit

Sep 2020 – June 2021

Java Developer

Bengaluru, India

- Designed and developed secure insurance applications using Java Spring Boot and React.js, enhancing policy management and claim processing efficiency by 25%.
- Architected and built RESTful APIs while migrating legacy systems to Azure-based microservices, improving scalability and reducing operational costs by 30%.
- Implemented robust JWT-based authentication and Spring Security configurations, strengthening user identity management and access control in compliance with security protocols.
- Automated CI/CD pipelines using Jenkins and Azure DevOps to minimize deployment downtime and improve release reliability, aligning with best practices in agile development.
- Developed a FastAPI microservice for data classification and reporting, reducing processing time by 35% and refining technical design processes.

EDUCATION

Masters, Information Technology - **University of Cincinnati** - Aug 2023 - Dec 2024

CERTIFICATIONS

- AWS Certified Developer – Associate
- Full-Stack Java Development: Coursera
- Machine Learning Training: Internship Studio
- Image Processing and Computer Vision: Udemy
